A system of bounded responsibilities

Understand what each component owns, how relationships are evidenced, and where integrations remain optional or unknown.

F# generated | Static first | Printable

> Claims change state only when their evidence supports the transition.

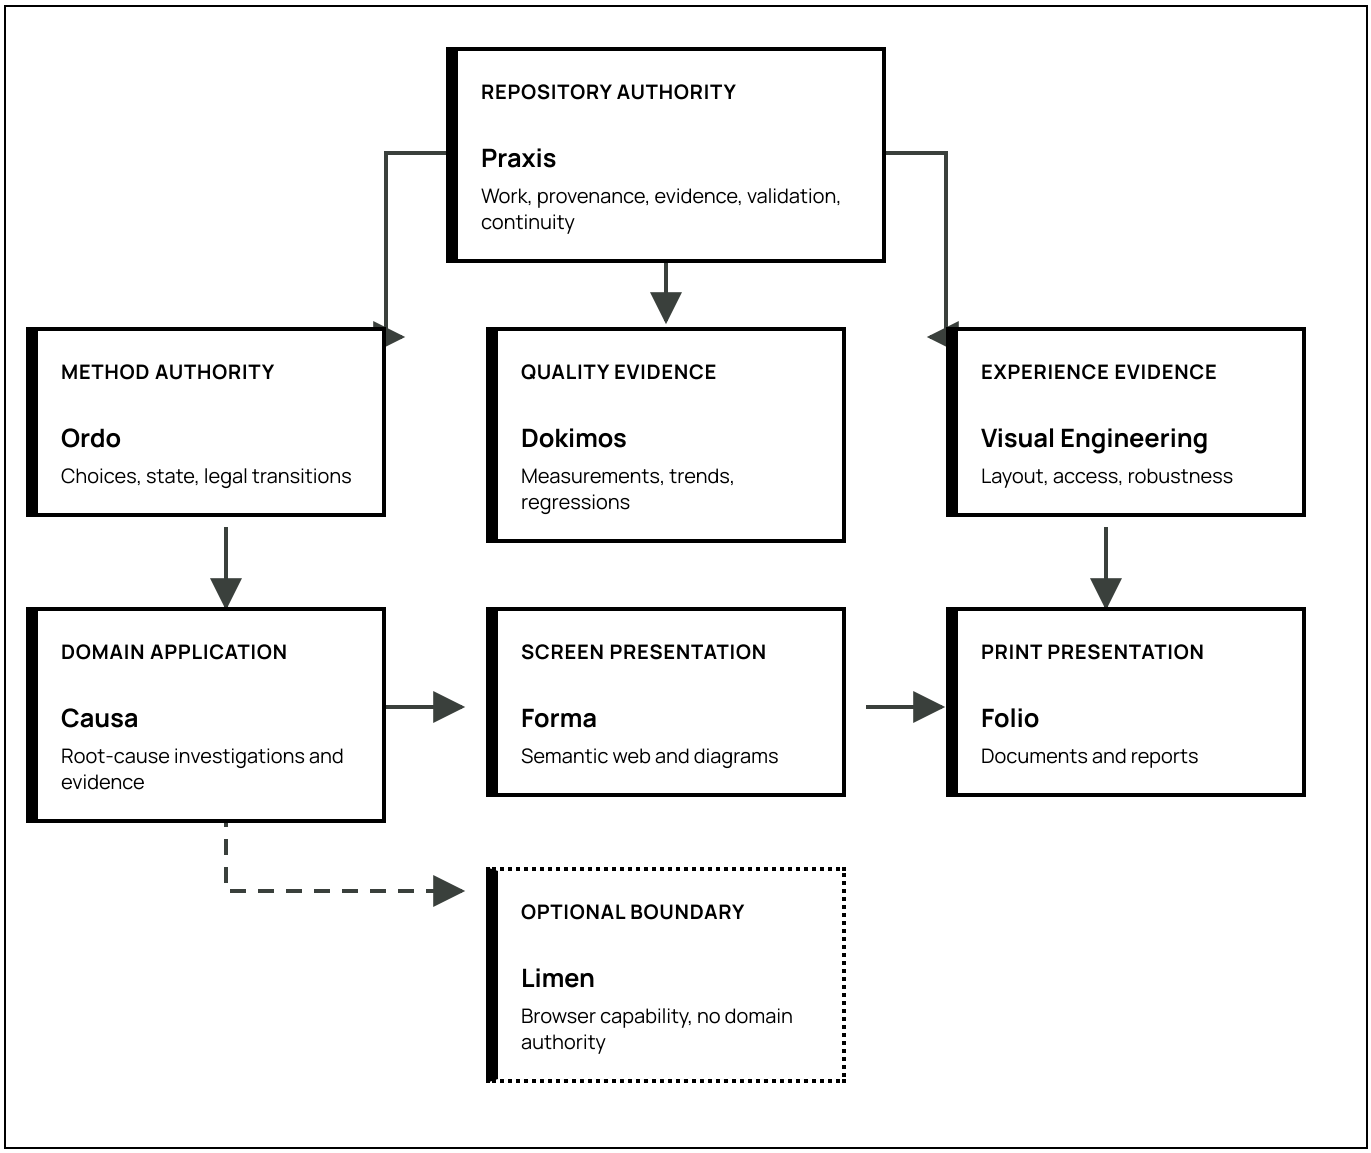

D01 · SYSTEM ARCHITECTURE

Responsibilities and evidenced relationships

The map includes the systems named by the mission while keeping domain, process, quality, presentation, and browser authority separate.

D01 — Echelon system architecture

Solid lines are relationships stated by the cited sources. The dashed line is an optional browser capability that this website does not use. Position does not imply ownership.

1. Ordo emits versioned decision and transition observations that Praxis can preserve without taking over Ordo's semantic authority.
2. Dokimos owns code-quality evidence while Praxis owns process telemetry and Ordo owns application-state legality.
3. Visual Engineering supplies conformance criteria for Forma screen output and Folio print output.
4. Rehearsal 4 applied Praxis governance to the Causa implementation.
5. Causa's rehearsal UI used Forma for screen presentation and Folio for printable reports.

6. Causa used Limen as a browser-capability boundary; this is a documented consumer relationship, not a requirement for every site.

ARCHITECTURE ATLAS

Bounded responsibilities before integrations

Adjacency does not prove a dependency. Every relationship on this site is labeled by evidence status and linked to its source.

GOVERNED EXECUTION

Praxis

Repository work, provenance, validation, evidence, and durable continuity.

Documented contract

METHOD

Ordo

State-directed engineering concepts, legal transitions, and explicit decision boundaries.

Documented contract

PRESENTATION

Forma

Zero-runtime semantic HTML, CSS, accessibility, marketing, and diagram presentation contracts.

Verified

PRINT

Folio

CSS-first printable documents and passive light-DOM print components.

Verified

BROWSER BOUNDARY

Limen

Optional stateful browser and WebAssembly boundary; not required by this static site.

Documented contract

EXPERIENCE EVIDENCE

Visual Engineering

Evidence-led layout, accessibility, interaction, and conformance criteria.

Documented contract

EVIDENCE RULE

A system map is not an integration claim

Verified implementation, documented contract, experiment, proposal, and unknown are separate states. The diagram and component directory preserve those distinctions.

DECISION

Static documentation uses Forma and Folio directly. Limen remains optional until a stateful browser feature has a demonstrated need.
